## DETAILED ACTION

### ***Election/Restrictions - Restriction Requirement***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15, drawn to a method of implementing a barrier to fluid flow in at least one direction, classified in class 52, subclass 744.1.
- II. Claims 16- 35, drawn to a configuration implementing a barrier to fluid passage in at least one direction, classified in class 52, subclass 411.

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the claimed configuration can be made by another and materially different process such as one in which the adhesive is applied to the non-porous material prior to placing the non-porous material upon the first section.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

***Election/Restrictions - Election of Species Requirement***

*This application contains claims directed to **four groups of species** of the claimed invention from which Applicants must elect.* The four groups of species from which Applicants must elect are as follow:

Species I (as directed to plates/foils): species of one plate/foil; species of two plate/foil; and species of three plate/foil.

Species II (as directed to material for barrier - see claims 2 and 17): metal; metal alloy; steel alloy; stainless steel; composite material; composite material containing at least some metal; and combinations thereof.

Species III (as directed to joining means): tack welding; soldering; gluing; heating; applying pressure; and combinations thereof.

Species IV: Fig 4: and Fig. 5.

*Applicants are required under 35 U.S.C. 121 to elect a single disclosed species from **each of the four groups of species*** for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, independent claims 1 and 16 appear to be generic.

Applicants are advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should Applicants traverse on the ground that the species are not patentably distinct, Applicants should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
